

Handedness proxy $\omega(t_0)$

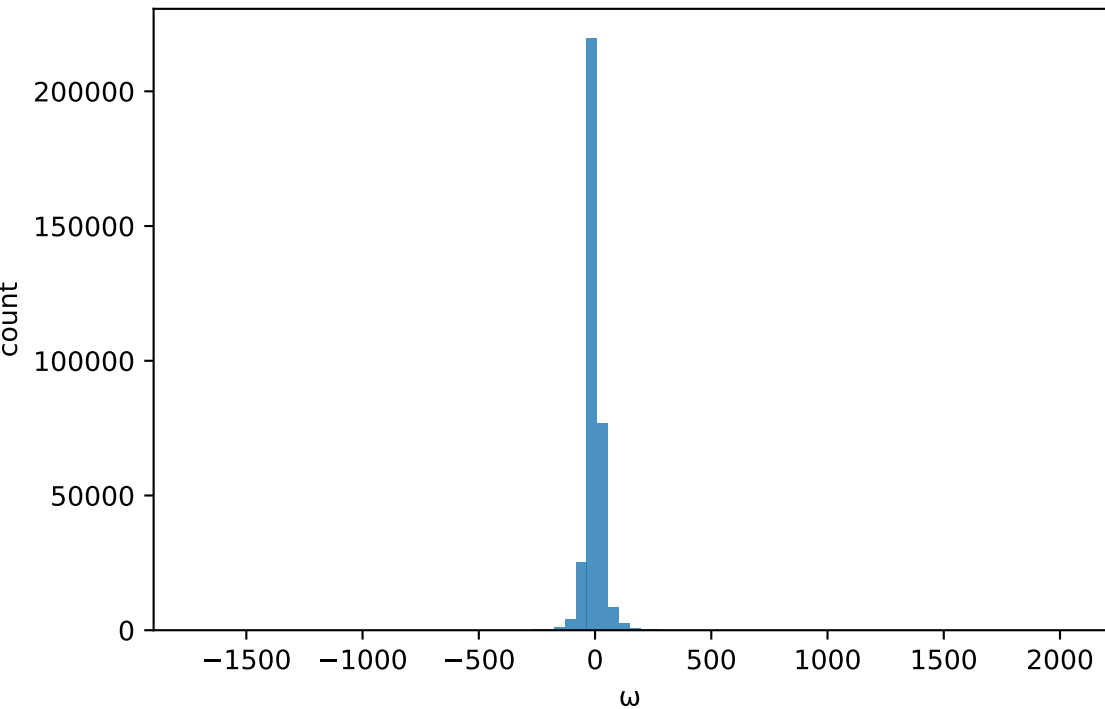

Handedness proxy $\omega(t1)$

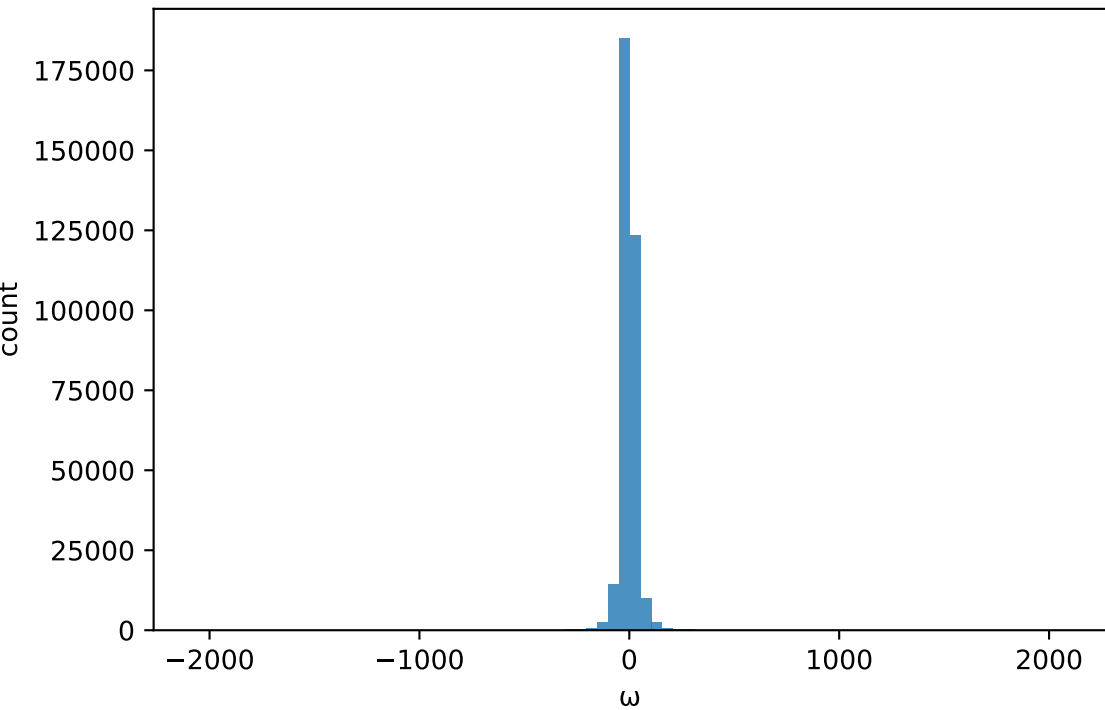

$$\Delta\omega = \omega(t_1) - \omega(t_0)$$

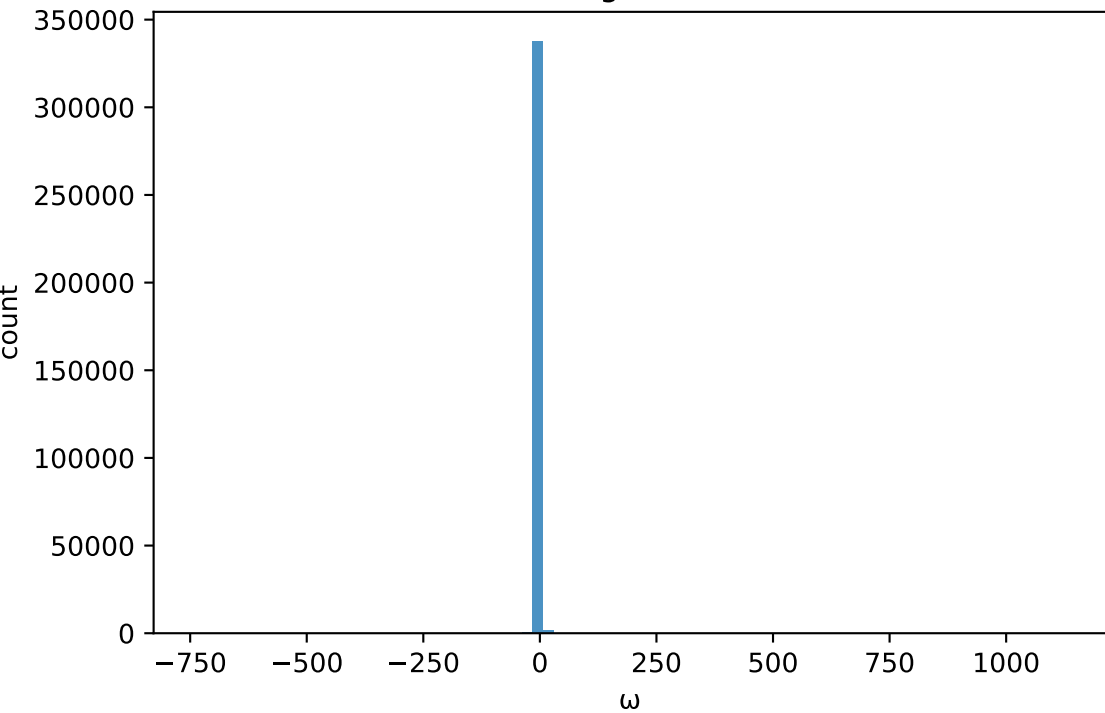

Histogram $\omega(t_0)$

Histogram $\omega(t1)$

Histogram $\Delta\omega$

Torsion handedness asymmetry (vorticity of unit ∇T)

Grid: 600x600 mask_margin=8

t0:	mean=-2.7501e-01	mean =2.2321e+01	std=4.9263e+01	skew=0.572
t1:	mean=-2.8995e-01	mean =2.2311e+01	std=4.9499e+01	skew=-0.169
Δ :	mean=-1.4946e-02	mean =9.1931e-01	std=8.6142e+00	skew=2.972

Interpretation: non-zero signed means/skew indicate net handedness; growth from t0→t1 (Δ)
